## JavaScript – stopwatch

---

The following exercise contains the following subjects:

- intervals

### Instructions

Create a web page that has a stopwatch with a start and stop button.

- The stopwatch should have milliseconds, seconds, and minutes.
- When you click on the start button for the first time, the timer will start running (from 00:00:00 to 60:00:00 minutes)
- When you click on the stop button, it will freeze the time that elapsed from the start.
- When you click start again it will continue counting the time, from where it stopped.
