

Front-end development: Arrays

JavaScript – Length of strings

The following exercise contains the following subjects:

- Array

Instructions

Write a function that will receive an array of strings and will return a new array containing all the lengths of all the strings in the array it got as a parameter.

So that if you call this function with this array for example:

`["boo", "doooo", "hoo", "ro"]`

it will return this array: `[3, 5, 3, 2]`.
