Basics

JavaScript – px to integer

The following exercise contains the following subjects:

- integers

Instructions

Create a JS function to determine whether or not a given year is a leap year. The function should take a year as an argument:

1. Determine whether or not it is a leap year
 - If the given year is a leap year, the program should print "It is indeed a leap year", otherwise the program will print "This is not a leap year."

Help:

every year that is divisible by 4 is a leap year except for the ones that are also divisible by 100 unless it is divisible by 400.

Example: 2012 is the leap year 2100 is not But 2400 is.
