

# Backend: Node JS

## Node JS – file system

---

The following exercise contains the following subjects:

- ◆ file system

## Instructions

Now we know how to create, write and append text to an existing file using the fs module, lets do the following:

1. Create a new txt file using the same fs module method we have learned before.
2. Create a copy of the newly created txt file using a method from the fs module.
3. Rename one of the files using a method from the fs module.
4. Get a list of all the file names of the current directory using a method from the fs module.
5. Find out and implement another method for the fs module.
