

Front-end development

JavaScript – heroes

The following exercise contains the following subjects:

- bind, call, apply

Instructions

We have an array of superheroes objects:

```
const wonderWoman = {  
  name: "Diana Prince"  
}  
const batman = {  
  name: "Bruce Wayne"  
}  
const superHeroes = [wonderWoman, batman];
```

and a print name function:

```
function printName() {  
  console.log(`my name is ${this.name}`);  
}
```

We want to print the all heroes names. Implement the printHeroes function:

Note: you cannot change the super heroes objects

```
function printHeroes(heroes, printFunc) {  
  //add your code here  
}
```
