

# Front-end development:

## Sort function

### JavaScript – sorting strings

---

The following exercise contains the following subjects:

- sort

### Instructions

Answer the following questions:

a. Array of words

```
const foods = ["falafel", "sabich", "hummus",  
"pizza with extra pineapple"];
```

a.1. Sort the array of strings from descending to ascending order.

a.2. Sort the array of strings from ascending to descending order.

b. Let's sort an array of words that includes a word with an uppercase:

```
const foodsWithUpperCase = [  
  "falafel",  
  "Sabich",  
  "hummus",  
  "pizza with extra pineapple",  
];
```

b.1. Sort the array of strings from descending to ascending order.

b.2. Sort the array of strings from ascending to descending order.

c. Longest word

```
const words = ["apple",  
  "supercalifragilisticexpialidocious",  
  "hi", "zoo"];
```

c.1. Sort the array of strings from the longest word to the shortest word only using the sort function
