Front-end development: APIs

JavaScript – Movie app

The following exercise contains the following subjects:

- API's

Instructions

Let's create a small movie app.
We will be using the [OMDB API](#).
We need to register for an API key [here](#).
You will get an email with your unique API key.

Read the documentation on what you can do with this API.

To have some influence look [here](#)

We want a user to type a movie name at the input and get the data displayed on the screen:

1. Movie poster
2. Movie title
3. Genre
4. Year
5. Plot
6. Director
7. Actors

8. Ratings of movies from IMDB, rotten tomatoes, and Metacritic. (make sure that particular movie gives you all the ratings. It could be, that movie won't give you all 3 ratings)

Each time a user searches for a new movie remove the old movie from the screen.

Extra:

There is so much more you can do with the API. Research what more things you can do with it in the documentation.
