Front-end development:

JavaScript – who is stronger

The following exercise contains the following subjects:

- bind, call, apply

Instructions

1. What is wrong with the code? explain in your own words
2. Fix the code so that invoking the whoIsStronger function will print "I am stronger".

note: you cannot change the 'hero' or the whoIsStronger function.

```javascript
const hero = {
health: 5,
power: 68,
getStrength: function(){
  if (this.health <= 5){
     return this.power - 10;
   } else return this.power;
  }
}
function whoIsStronger(getStrength){
  const myStrength = 82;
  if (getStrength() < myStrength){
    return "I am stronger";
  } else return "You are stronger";
}
whoIsStronger(hero.getStrength);
```
